*Monkeys on the Edge* Feb 17 2022 Long-tailed macaques (*Macaca fascicularis*) have a wide geographical distribution and extensively overlap with human societies across southeast Asia, regularly utilizing the edges of secondary forest and inhabiting numerous anthropogenic environments, including temple grounds, cities and farmlands. Yet despite their apparent ubiquity across the region, there are striking gaps in our understanding of long-tailed macaque population ecology. This timely volume, a key resource for primatologists, anthropologists and conservationists, underlines the urgent need for comprehensive population studies on common macaques. Providing the first detailed look at research on this underexplored species, it unveils what is currently known about the population of *M. fascicularis*, explores the contexts and consequences of human-macaque sympatry and discusses the innovative programs being initiated to resolve human-macaque conflict across Asia. Spread throughout the book are boxed case studies that supplement the chapters and give a valuable insight into specific field studies on wild *M. fascicularis* populations.

**Cutting-edge Technologies in Ancient Greece** Jul 30 2020 This volume examines materials produced with the use of fire and mostly by use of the kiln (metals, plasters, glass and glaze, aromatics). The technologies based on fire have been considered high-tech technologies and they have contributed to the evolution of man throughout history. Papers highlight technical innovations

of the technician/artist/pyrotechnologist that lived in the Aegean (mainland Greece and the islands) during the Bronze Age, the Classical and the Byzantine periods.

**Edge of Morning** Aug 23 2022 "An important new collection of Native American writers essaying the cultural significance of Utah's Bears Ears landscape." —THE SALT LAKE TRIBUNE In support of tribal efforts to protect the Bears Ears, Native writers bear testimony to the fragile and essential nature of this sacred landscape in America's remote red rock country. Through poem and essay, these often-ignored voices explore the ways many native people derive tradition, sustenance, and cultural history from the Bears Ears. "To us, these places represent more than grass, hills, mountains, and trees...they hold the links to our past and our future." —Martie Simmons, Ho-Chunk The fifteen contributors are multi-generational writers, poets, activists, teachers, students, and public officials, each with a strong tie to landscape and a particular story to tell. Willie Grayeyes, Chairman of Utah Diné Bikéyah, shares his ancestral ties to the Bears Ears. Klee Benally, Diné activist, musician, and filmmaker, asks, "What part of sacred don't you understand?" Morning Star Gali, Tribal Historic Preservation Officer at Pit River Tribe, speaks to the fight for cultural preservation. The fifteen contributors speak for the Bears Ears and elevate the conversation around tribal sovereignty and sacred places across the US. **Innovation and Disruption at the Grid's Edge** Feb 05 2021 Innovation and Disruption at the Grid's Edge examines the viable developments in peer-to-peer transactions enabled by open

platforms on the grid's edge. With consumers and prosumers using more electronic platforms to trade surplus electricity from rooftop solar panels, share a storage battery, or use smart gadgets that manage load and self-generation, the grid's edge is becoming crowded. The book examines the growing number of consumers engaging in self-generation and storage, and analyzes the underlying causes and drivers of change, as well as the implications of how the utility sector—particularly the distribution network—should/could be regulated. The book also explores how tariffs are set and revenues are collected to cover both fixed and variable costs in a sustainable way. This reference is useful for anyone interested in the areas of energy generation and regulation, especially stakeholders engaged in the generation, transmission, and distribution of power. Examines the new players that will disrupt the energy grid markets Offers unique coverage of an emerging and unpublished topic Helps the reader understand up-to-date energy regulations and pricing innovations

**On the Edge** Aug 19 2019 A pioneering examination of history, current affairs, and daily life along the Russia-China border, one of the world's least understood and most politically charged frontiers. The border between Russia and China winds for 2,600 miles through rivers, swamps, and vast taiga forests. It's a thin line of direct engagement, extraordinary contrasts, frequent tension, and occasional war between two of the world's political giants. Franck Billé and Caroline Humphrey have spent years traveling through and studying this important yet forgotten region. Drawing on pioneering fieldwork, they introduce readers to the lifeways, politics, and history of one of the world's most consequential and enigmatic borderlands. It is telling that, along a border consisting mainly of rivers, there is not a single operating passenger bridge. Two different worlds have emerged. On the Russian side, in territory seized from China in the nineteenth century, defense is prioritized over the economy, leaving dilapidated villages slumbering amid the forests. For its part, the Chinese side is heavily settled and increasingly prosperous and dynamic. Moscow worries about the imbalance, and both governments discourage citizens from interacting. But as Billé and Humphrey show, cross-border connection is a fact of life, whatever distant authorities say. There are marriages, friendships, and sexual encounters. There are joint businesses and underground deals, including no shortage of smuggling. Meanwhile some indigenous peoples, persecuted on both sides, seek to "revive" their own alternative social groupings that span the border. And Chinese towns make much of their proximity to "Europe," building giant Russian dolls and replicas of St. Basil's Cathedral to woo tourists. Surprising and rigorously researched, *On the Edge* testifies to the rich diversity of an extraordinary world haunted by history and divided by remote political decisions but connected by the ordinary imperatives of daily life.

**On the Edge of the Global** Apr 07 2021 This book explores the malaise present in post-colonial Tonga, analyzing the way in which segments of this small-scale society hold on to different understandings of what modernity is, how it should be made relevant to local contexts, and how it should mesh with practices and symbols of tradition.

**Your Macroeconomic Edge** Oct 01 2020 Most "managerial economics" textbooks are thinly disguised microeconomics texts: highly theoretical, too dependent on abstract and unproven assumptions, and simply undigestible by busy, practical-minded executives/readers. Furthermore, such texts leave it up to the reader to apply their lessons so as to gain value from the knowledge, and to reinforce that knowledge through practice. The "theory of the firm" does not resonate with most corporate executives. But in fact, economic forces drive the context for all our important

business decisions: When and how much to expand or contract; which markets to enter and exit; when to raise or lower prices; and how to invest surplus resources (retained earnings for companies and savings for individuals). This book is an application of economics (both micro and macroeconomics) to one of the central challenges of our age for any citizen in a developed economy: How to invest their resources in a changed economic landscape. It contends that the quarter century from the early 1980s to the late 2000s was a unique historical period, creating an exceptionally benign commercial and investing environment. It will not return once the Great Recession is firmly behind us. The core message of the book is an extended application of economic principles and reasoning, phrased in a form readily digestible to any interested layman. It can be used as a companion to a traditional economics text, or as a stand-alone application-oriented text. The main application explored is of investment decisions of corporations seeking to deploy retained earnings, and of individuals seeking to prepare for the day when they no longer rely on wage income.

**The Edge** Nov 21 2019 "If you're not living on the edge, you're taking up too much space." —Jim Whittaker, first American to climb Mt. Everest A leader's job—in a radically changing world—is standing on the cliff edge, getting a grip on unfamiliar landscapes, and acquiring the skills for leading the enterprise into new territory. In a world facing the unprecedented challenges of global pandemic and economic disruption, every leader needs to find the edge for leaping across the breach and breaking new ground on the other side. Michael Useem provides rare insight into how ten leaders confronted hard realities. He looked close-in at the life and work of people such as Bill McNabb of Vanguard, Jeffrey Lurie of the Philadelphia Eagles, Alex Gorsky of Johnson & Johnson, and Tricia Griffith of Progressive Insurance. His "you are there" profiles chronicle fateful decisions such as: Meeting the concerns of a next-generation workforce that considers inclusiveness an integral part of business Developing a strategy for growth in a market that is cratering Escaping the confines of an insane, always-on, 24/7 world to learn about the real, granular changes happening in the marketplace Useem's profiles of leaders on the edge provide the inspiration and the guidance we all need for adapting and thriving in an era of massive disruption and continuous transformation.

**Measuring Asset Ownership and Entrepreneurship from a Gender Perspective** Dec 15 2021 Amid increasing demand for systematically collected statistics on asset ownership and control, the absence of standard guidelines and methods has constrained the collection and production of basic data. To fill this methodological gap, the Asian Development Bank, in collaboration with development partners, supports the efforts initiated under the global initiative Evidence and Data for Gender Equality, which aims to standardize methods of data collection for comparable sex-disaggregated data, and advocate for mainstreaming gender statistics on entrepreneurship and asset ownership. Documenting pilot surveys from three countries, this report outlines the importance of sex-disaggregated data on asset ownership and entrepreneurship and describes the intricacies and methodological challenges of producing these data through household surveys.

**Restless Cities on the Edge** Mar 06 2021 This book is a sociological description and analysis of urban collective actions, protests, resistance, and riots that started in the 1990s and continue in different forms to this date in Rome, Italy. Through participant observation, ethnographic study, and in-depth qualitative interviews—often occurring during times of protest or even violent action—this book studies a variety of urban realities: grassroots movements, anti-migrant district riots, and the daily lives of the fluid and fluctuating multi-ethnic groups in the city. Ultimately, this book gives voice to some of the protagonists involved, proposing interpretations to each reality described, but also making cross-connections with politics and migration when pertinent. It offers a new understanding of urban collective actions cognizant of the 'common goods', but also of the emergence of new right-wing populism.

**Dulling the Cutting Edge: How Patent-Related Policies and Practices Hamper Innovation in China** Apr 19 2022 This study's statistical analysis shows that patent quality and innovation in China deserve improvement, and an in-depth legal, management science, and economic analysis in the study shows that various patent-related policies and practices actually hamper patent quality and innovation in China. Over 50 recommendations for reform are provided. The study is divided into four chapters, summaries of which are as follows: Although China became the world leader in quantity of domestically filed patent applications in 2011, the quality of these patents needs improvement. Also, while certain innovation in China is rising, the country's actual innovation appears over-hyped by some sources. There appears to be an overly heavy focus on government-set quantitative patent targets in China, which can hamper patent quality and innovation. This overemphasis involves over 10 national-level and over 150 municipal/provincial quantitative patent targets, mostly to be met by 2015, which are also linked to performance evaluations for SoEs, Party officials and government ministries, universities and research institutes, and other entities. China has a wide-range of other policies, many of which are at least partially meant to encourage patents, that can actually discourage quality patents, and highest-quality patents in particular, and innovation. Examples of these policies include a variety of measures with requirements for "indigenous intellectual property rights" that are linked to financial incentives (many of which are unrelated to government procurement); a range of other government-provided financial incentives for patent development (e.g. certain patent filing subsidies); inappropriate inventor remuneration rules; discriminatory standardization approaches; and a wide range of others. There are a host of concerns surrounding rules and procedures for patent application review and those for enforcement of patent disputes that can hamper building of quality patents and innovation in China. These include concerns about abuse of patent rights, difficulties invalidating utility models, and a wide range of other issues.

Privacy-Preserving in Edge Computing Jun 21 2022 With the rapid development of big data, it is necessary to transfer the massive data generated by end devices to the cloud under the traditional cloud computing model. However, the delays caused by massive data transmission no longer meet the requirements of various real-time mobile services. Therefore, the emergence of edge computing has been recently developed as a new computing paradigm that can collect and process data at the edge of the network, which brings significant convenience to solving problems such as delay, bandwidth, and off-loading in the traditional cloud computing paradigm. By extending the functions of the cloud to the edge of the network, edge computing provides effective data access control, computation, processing and storage for end devices. Furthermore, edge computing optimizes the

seamless connection from the cloud to devices, which is considered the foundation for realizing the interconnection of everything. However, due to the open features of edge computing, such as content awareness, real-time computing and parallel processing, the existing problems of privacy in the edge computing environment have become more prominent. The access to multiple categories and large numbers of devices in edge computing also creates new privacy issues. In this book, we discuss on the research background and current research process of privacy protection in edge computing. In the first chapter, the state-of-the-art research of edge computing are reviewed. The second chapter discusses the data privacy issue and attack models in edge computing. Three categories of privacy preserving schemes will be further introduced in the following chapters. Chapter three introduces the context-aware privacy preserving scheme. Chapter four further introduces a location-aware differential privacy preserving scheme. Chapter five presents a new blockchain based decentralized privacy preserving in edge computing. Chapter six summarize this monograph and propose future research directions. In summary, this book introduces the following techniques in edge computing: 1) describe an MDP-based privacy-preserving model to solve context-aware data privacy in the hierarchical edge computing paradigm; 2) describe a SDN based clustering methods to solve the location-aware privacy problems in edge computing; 3) describe a novel blockchain based decentralized privacy-preserving scheme in edge computing. These techniques enable the rapid development of privacy-preserving in edge computing.

*Journalism and Political Exclusion* May 28 2020 The constraints of news production and the consequent limitations of news result directly in dissatisfaction throughout news audiences. News stories are frequently found to be inadequately informative to the extent that journalism is more inclined to generate political disenchantment, rather than prompt its audiences to pursue a fully engaged level of political participation in their societies. *Journalism and Political Exclusion* provides a multi-method, integrated analysis of news production and news audiences, including a long-term study of community activists in a central Canadian city. During the seven-year fieldwork period, different groups of research participants completed questionnaires, wrote news diaries, and were interviewed in their homes while viewing network television newscasts. Clarke shows that frustrations with the informational limitations of television and other news media are accelerated among women and the working-class often lack opportunities to access alternative information sources. The critical contribution of journalism to the production and reproduction of ideas about social reality is frequently acknowledged and assumed yet rarely investigated and demonstrated. Through an examination of the everyday realities of both news production and news reception, *Journalism and Political Exclusion* also shows how the current "crises" of professional journalism heighten the level of political exclusion experienced by various social groups.

*Urban Ecologies on the Edge* Jan 04 2021 Laguna Lake, the largest lake in the Philippines, supplies Manila's dense urban region with fish and water while operating as a sink for its stormflows and wastes. Transforming the lake to deliver these multiple urban ecological functions, however, has generated resource conflicts and contradictions that unfold unevenly across space. In *Urban Ecologies on the Edge*, Kristian Karlo Saguin tracks the politics of resource flows and unpacks the narratives of Laguna Lake as Manila's resource frontier. Provisioning the city and keeping it safe from floods are both frontier-making processes that bring together contested socioecological imaginaries, practices, and relations. Combining fieldwork and historical accounts, Saguin demonstrates how people—powerful and marginalized—interact with the state and the environment to produce the unequal landscapes of urbanization at and beyond the city's edge.

Sailing the Water's Edge Jul 22 2022 How U.S. domestic politics shapes the nation's foreign policy. When engaging with other countries, the U.S. government has a number of different policy instruments at its disposal, including foreign aid, international trade, and the use of military force. But what determines which policies are chosen? Does the United States rely too much on the use of military power and coercion in its foreign policies? *Sailing the Water's Edge* focuses on how domestic U.S. politics—in particular the interactions between the president, Congress, interest groups, bureaucratic institutions, and the public—have influenced foreign policy choices since World War II and shows why presidents have more control over some policy instruments than others. Presidential power matters and it varies systematically across policy instruments. Helen Milner and Dustin Tingley consider how Congress and interest groups have substantial material interests in and ideological divisions around certain issues and that these factors constrain presidents from applying specific tools. As a result, presidents select instruments that they have more control over, such as use of the military. This militarization of U.S. foreign policy raises concerns about the nature of American engagement, substitution among policy tools, and the future of U.S. foreign policy. Milner and Tingley explore whether American foreign policy will remain guided by a grand strategy of liberal internationalism, what affects American foreign policy successes and failures, and the role of U.S. intelligence collection in shaping foreign policy. The authors support their arguments with rigorous theorizing, quantitative analysis, and focused case studies, such as U.S. foreign policy in Sub-Saharan Africa across two presidential administrations. *Sailing the Water's Edge* examines the importance of domestic political coalitions and institutions on the formation of American foreign policy.

*The Edge of Maine* Aug 31 2020 Novelist and biographer Geoffrey Wolff has spent many summers in Maine—sailing its coastal waters, climbing its rocky peaks, and communing with its natives. Now, with the voice of a passionate insider, he brings readers into the heart of this striking region and explains what makes it unique. Starting with a gripping tale about being lost offshore in the fog with inadequate navigational aids, Wolff goes on to describe the coast's geological history and discovery by Europeans. He then turns a keen eye towards Mainers, their mores and peculiarities, and to the summer rusticators who for generations have invaded the stunning waterfronts. A section on boat

building celebrates the extraordinary rescue of Maine's foremost craft; another on lobsters tells the rich story of the custom, taste, commerce, environmental conflict, and scientific mystery surrounding these critical crustaceans. Here is a true feast—travel literature at its best.

*Edge Entanglements with Mental Health Allyship, Research, and Practice* Dec 03 2020 *Edge Entanglements* traverses the borderlands of the community "mental health" sector by "plugging in" to concepts offered by Gilles Deleuze and Felix Guattari along with work from Mad Studies, postcolonial, and feminist scholars. Barlott and Setchell demonstrate what postqualitative inquiry can do, surfacing the transformative potential of freely-given relationships between psychiatrised people and allies in the community. Thinking with theory, the authors map the composition and generative processes of freely-given, ally relationships. *Edge Entanglements* surfaces how such relationships can unsettle constraints of the mental health sector and produce creative possibilities for psychiatrised people. Affectionately creating harmonies between theory and empirical "data," the authors sketch ally relationships in ways that move. Allyship is enacted through micropolitical processes of becoming-complicit: ongoing movement towards taking on the struggle of another as your own. Barlott and Setchell's work offers both conceptual and practical insights into postqualitative experimentation, relationship-oriented mental health practice, and citizen activism that unsettles disciplinary boundaries. Ongoing, disruptive movements on the margins of the mental health sector – such as freely-given relationships – offer opportunities to be otherwise. *Edge Entanglements* is for people whose lives and practices are precariously interconnected with the mental health sector and are interested in doing things differently. This book is likely to be useful for novice and established (applied) new material and/or posthumanist scholars interested in postqualitative, theory-driven research; health practitioners seeking alternative or radical approaches to their work; and people interested in citizen advocacy, activism, and community organising in/out of the mental health sector.

Instead it's a story of urban transformation, cultural shifts, and an expanding contemporary art scene. The Chelsea Gallery District has become New York's most dominant neighborhood for contemporary art, and the streets of the west side are filled with gallery owners, art collectors, and tourists. Developments like the High Line, historical preservation projects like the Gansevoort Market, the Chelsea galleries, and plans for megaprojects like the Hudson Yards Development have redefined what is now being called the "Far West Side" of Manhattan. David Halle and Elisabeth Tiso offer a deep analysis of the transforming district in New York's New Edge, and the result is a new understanding of how we perceive and interpret culture and the city in New York's gallery district. From individual interviews with gallery owners to the behind-the-scenes politics of preservation initiatives and megaprojects, the book provides an in-depth account of the developments, obstacles, successes, and failures of the area and the factors that have contributed to them.
