Team Teaching at the College Level describes a college-level team teaching program which affords unusual opportunities for developing an educational environment that fosters productive personal relationships between and among college students and faculty. The book describes the nature and scope of selected team teaching programs; the manner in which such programs can be administered; the potential impact of team teaching on a developing curriculum; the role of faculty and students who constitute the teaching-learning team; the particular housing requirements of team teaching programs; and finally, the limitations and future prospects of this emerging concept. In the following chapters frequent reference is made to the philosophy, program, and methodology of Boston University's College of Basic Studies, where a team system was first developed in 1949 and where an entire collegiate two-year program of studies functions on a team teaching plan. This College's extensive experience with team teaching has made possible refinements which

may interest those seeking to broaden their understanding of the potential role and function of team teaching in higher education. * Rich in case studies, examples, and in-chapter elements that focus on the challenges of launching and operating a technology venture * In-depth examination of intellectual property development, valuation, deal structuring, and equity preservation, issues of most relevance to technology start-ups * Extensive discussion of technology management and continuous innovation as a competitive advantage * Addresses the issue of leading, managing, motivating, and compensating technical workers * More time on the fundamentals of marketing and selling, as these are elements of entrepreneurship commonly most neglected by engineers and scientists This book provides a comprehensive overview of the chalcogenide glass science and various applications based on the glasses. It starts with a review on the glass-forming ability of various systems, followed by a discussion on the structural and physical properties of various chalcogenide glasses and their application in integrated optics. The chapters have been contributed by prominent experts from all over the world, and

therefore, the book presents the recent research advances in the area. This book will appeal to anyone who is involved in glass science and technology and glass application. Android Best Practices by Godfrey Nolan shows you how to make your Android apps stand out from the crowd with great reviews. Why settle for just making any Android app? Build a brilliant Android app instead that lets your users praise it for ease of use, better performance, and more. Using a series of example apps which gradually evolve throughout this book, Android Best Practices brings together current Android best practices from user interface (UI)/user experience (UX) design, test-driven development (TDD), and design patterns (e.g., MVC) to help you take your app to the next level. In this book you'll learn how to:

- Use Android design patterns for consistent UI experience on many devices
- Use agile techniques such as test-driven development, behavior-driven development, and continuous integration
- Improve the speed and overall performance of your app
- Organize an Android app using design patterns such as MVC/MVP
- Create and consume REST and SOAP web services

Designing and developing an app that runs well on many

if not all the leading Android smartphones and tablets today can be one of the most daunting challenges for Android developers. Well, this book takes much of the mystery out of that for you. After reading and using *Android Best Practices*, you'll become a much better Android app designer and developer, which in turn can make your apps better placed and more successful in the market place. Booth Tarkington is one of an elite group of only three writers who have been awarded the Pulitzer Prize for literature more than once. The novel *The Turmoil* is the first entry in the 'Growth' trilogy of books that focus on the social and economic upheaval brought about by the Industrial Revolution. *Step Forward* is a standards-based, four-skills course that integrates language instruction into meaningful, real-life contexts. Barbara M. Hobson . . . makes a compelling case for the reform of prostitution policy in . . . *Uneasy Virtue*. [This volume] demonstrates an effective analytical approach to understanding public policy and its impact on prostitution policy. . . . *Uneasy Virtue* proves particularly relevant today as right wing groups begin to guide discourse and influence policy around reproductive rights, sexuality and the future of gender equality. As Hobson proposes, the reform of prostitution polciy must be viewed in the broader context of the political and economic struggles to emancipate women and thereby create a more rational society."—Samuel Suchowlecky, *Commentaries Only in America* is my tip of the hat to the one hundredth anniversary of our national parks. It describes a 15,000 mile circuit through the national parks of the continental United States. My book includes photographs, maps, and my drawings. May you get a deeper appreciation of America as a land of unlimited horizons, adventure, and beauty as you visit the treasures of our national parks. Clay minerals are one of the

most important groups of minerals that destroy permeability in sandstones. However, they also react with drilling and completion fluids and induce fines migration during hydrocarbon production. They are a very complex family of minerals that are routinely intergrown with each other, contain a wide range of solid solutions and form by a variety of processes under a wide range of temperatures and rock and fluid compositions. In this volume, clay minerals in sandstones are reviewed in terms of their mineralogy and general occurrence, their stable and radiogenic isotope geochemistry, XRD quantification, their effects on the petrophysical properties of sandstones and their relationships to sequence stratigraphy and palaeoclimate. The controls on various clay minerals are addressed and a variety of geochemical issues, including the importance of mass flux, links to carbonate mineral diagenesis and linked clay mineral diagenesis in interbedded mudstone-sandstone are explored. A number of case studies are included for kaolin, illite and chlorite cements, and the occurrence of smectite in sandstone is reviewed. Experimental rate data for clay cements in sandstones are reviewed and there are two model-based case studies

that address the rates of growth of kaolinite and illite. The readership of this volume will include sedimentologists and petrographers who deal with the occurrence, spatial and temporal distribution patterns and importance of clay mineral cements in sandstones, geochemists involved in unraveling the factors that control clay mineral cement formation in sandstones and petroleum geoscientists involved in predicting clay mineral distribution in sandstones. The book will also be of interest to geologists involved in palaeoclimate studies basin analysis. Latest geochemical data on clays in sandstones Provides important information for geologists involved in basin analysis, sandstone petrology and petroleum geology If you are a member of the International Association of Sedimentologists (IAS), for purchasing details, please see: <http://www.iasnet.org/publications/details.asp?code=SP34> The most comprehensive book available on Macromedia's new Web layout program for ASP, JSP and Cold Fusion output. The book offers a comprehensive overview of controllability problems and minimum energy control for broad classes of dynamical systems, including linear, semilinear and nonlinear

systems, which are important for modeling systems in automatic control, electrical engineering, mechanics and informatics. It develops the theory of controllability for both finite and infinite dimensional dynamical systems described by differential state equation, and studies in detail functional analysis and matrix algebra, which provide essential and effective tools for the new solutions of a number of important controllability problems. The theoretical results are illustrated by examples throughout the book. Primarily intended for academic researchers working in mathematical control theory, the self-contained text is easily accessible and particularly interesting for control engineering and applied mathematics graduates. Sport Law: A Managerial Approach, third edition, merges law and sport management in a way that is accessible and straightforward. Its organization continues to revolve around management

functions rather than legal theory. Concise explanations, coupled with relevant industry examples and cases, give readers just enough legal doctrine to understand the important concepts that apply to each area. This book will help prepare students as they get ready to assume a broad range of responsibilities in sport, education, or recreation. Whether readers work as coaches or teachers; administer professional programs; manage fitness/health clubs; or assume roles in a high school, college, Olympic, or professional sport organization, legal concerns will inevitably be woven into their managerial concerns. This book provides knowledge of the law that helps create a competitive advantage and build a more efficient and successful operation that better serves the needs of its constituents.

Special Features of the Book

Managerial context tables. Chapter-opening exhibits act as organizational and study tools identifying managerial contexts in relation to major legal issues, relevant law, and illustrative cases for the chapter. Case opinions, focus cases, and hypothetical cases. Legal opinions--both excerpted (case opinions) and summarized (focus cases)--illustrate relevant legal points and

help readers understand the interplay between fact and legal theory. The cases include questions for discussion, and the instructor's manual provides guidance for the discussion. Hypothetical cases further highlight topics of interest and include discussion questions to facilitate understanding of the material; analysis and possible responses appear at the end of the chapter. Competitive advantage strategies. Highlighted, focused strategies based on discussions in the text help readers understand how to use the law to make sound operational decisions and will assist them in working effectively with legal counsel. Discussion questions, learning activities, and case studies. Thoughtful and thought-provoking questions and activities emphasize important concepts; they help instructors teach and readers review the material. Creative case studies stimulate readers, as future sport or recreation managers, to analyze situations involving a legal issue presented in the chapter. Annotated websites. Each chapter includes a collection of web resources to help readers explore topics further. Accompanying the web addresses are brief descriptions pointing out key links and the sites' benefits.

Bookmarking these sites will help readers in future research or throughout their careers. Sedimentary basins host, among others, most of our energy and fresh-water resources: they can be regarded as large geo-reactors in which many physical and chemical processes interact. Their complexity can only be well understood in well-organized interdisciplinary co-operations. This book documents how researchers from different geoscientific disciplines have jointly analysed the structural, thermal, and sedimentary evolution as well as fluid dynamics of a complex sedimentary basin system which has experienced a variety of activation and reactivation impulses as well as intense salt tectonics. In this book we have summarized our geological, geophysical and geochemical understanding of some of the most important processes affecting sedimentary basins in general and our view on the evolution of one of the largest, best explored and most complex continental sedimentary basins on Earth: The Central European Basin System. On the social forces behind the formation of the city's housing market and its relations to the development of a capitalist economy. Annotation copyrighted by Book News, Inc., Portland, OR

Winner of the Allan Nevins Prize of the Society of American Historians and the New York State Historical Association Manuscript Prize. My name is Flora Padilla and I am a mother, grandmother, pastor, and an author. I married a man that physically, emotionally and mentally abused me. During this turbulent marriage, I was also trying to raise two small children, work full-time and financially support my household.

Unexpectedly, I was injured on the job and lost the stability of having a steady income. This life-changing event shifted my path to my true calling. How did I become an overcomer against all odds? My book has the tools that I used to succeed, to be happy, blessed, victorious, and now an inspiration to others. I have spent my life "Mending Broken Hearts", because of my mended heart. Receive my story by faith. In recent years fractional calculus has played an important role in various fields such as mechanics, electricity, chemistry, biology, economics, modeling, identification, control theory and signal processing. The scope of this book is to present the state of the art in the study of fractional systems and the application of fractional differentiation. Furthermore, the manufacture of nanowires is important for

the design of nanosensors and the development of high-yield thin films is vital in procuring clean solar energy. This wide range of applications is of interest to engineers, physicists and mathematicians. A valuable presentation of theoretical and practical information in the area of liquid-solid filtration. The development of theoretical models is highlighted with practical design data and problem-related examples. Modern trends, e.g., membrane systems, are reported together with the fundamental aspects of particulate technology. The increasing interest in pollution control and environmental protection provides an expansive market for this book. Chemical engineers, chemists, physicists, water treatment/sewage engineers, civil engineers and all those concerned with filtration and pollution will find this book of tremendous value and practical use. A wise and insightful exploration of human navigation, what it means to be lost, and how we find our way. How is it that we can walk unfamiliar streets while maintaining a sense of direction? Come up with shortcuts on the fly, in places we've never traveled? The answer is the complex mental map in our

brains. This feature of our cognition is easily taken for granted, but it's also critical to our species' evolutionary success. In *From Here to There* Michael Bond tells stories of the lost and found—Polynesian sailors, orienteering champions, early aviators—and surveys the science of human navigation. Navigation skills are deeply embedded in our biology. The ability to find our way over large distances in prehistoric times gave *Homo sapiens* an advantage, allowing us to explore the farthest regions of the planet. Wayfinding also shaped vital cognitive functions outside the realm of navigation, including abstract thinking, imagination, and memory. Bond brings a reporter's curiosity and nose for narrative to the latest research from psychologists, neuroscientists, animal behaviorists, and anthropologists. He also turns to the people who design and expertly maneuver the world we navigate: search-and-rescue volunteers, cartographers, ordnance mappers, urban planners, and more. The result is a global expedition that furthers our understanding of human orienting in the natural and built environments. A beguiling mix of storytelling and science, *From Here to There*

covers the full spectrum of human navigation and spatial understanding. In an age of GPS and Google Maps, Bond urges us to exercise our evolved navigation skills and reap the surprising cognitive rewards. This book looks at the social and historical context of prostitution, exploring the forms and practices prostitution has assumed in many cultures over many centuries. Based on the assumption that one cannot understand prostitution without first understanding the role of women in society, this volume examines the historical, sociological, and anthropological background of prostitution. The authors expose the inextricable interweaving of scores of cultural dilemmas: women as property, pornography and the fear of sexuality, religion and promiscuity, sex and social class, and the control of venereal disease. The scientific achievements of the European Geotraverse Committee (EGT) are presented in this unique study of the tectonic evolution of the continent of Europe and the first comprehensive cross section of the continental lithosphere. Petroleum exploration has always been limited by the lack of adequate subsurface control. Exploration problems are usually problems of

extrapolation i.e. to greater depth, to laterally equivalent rocks, or back through time. Models are widely used as a way of describing complex geological systems so that they can be treated quantitatively and used as the basis for extrapolations and predictions. Models consider, typically, a simplified geological system that can be described mathematically. It is very important to know what simplifying assumptions have been made, when these assumptions are valid, and under what conditions their use may not be appropriate. This requires an understanding of the concepts involved in building the model and how the model operates. Models are best used as a tool for probing the system and evaluating the sensitivity of the conclusions to possible uncertainties in the values of the input parameters. In a sense, models permit experimental petroleum geochemistry and allow the user to answer the What if? questions e.g. What if the geothermal gradient had been higher in the past? What if the organic matter type had been different? This book provides students, exploration geologists, and others who would like to use the available models, with a general idea of how the models work, what

they can do, and what their limitations are. It also provides the information necessary to obtain the input data required by the commercial models. Radiationless Transitions is a critical discussion of research studies on the theory and experiments in radiationless transitions. This book is composed of nine chapters, and begins with discussions on the theory and experiment of photophysical processes of single vibronic levels and/or single rovibronic levels. The subsequent chapters deal with the spectroscopic investigations of intramolecular vibrational relaxation; the dynamics of molecular excitation by light; and the photophysical processes of small molecules in condensed phase. The discussions then shift to the high pressure effects on molecular luminescence and the internal conversion involving localized excitations, presenting one qualitative and one quantitative example, as well as the intersystem crossing with localized excitations. A chapter explores the energy transfer processes that occur after a molecule in solution is excited by light, with an emphasis on solid solutions in which the large amplitude molecular motion is largely quenched. This chapter also looks

into the liquid solutions in which the molecules can translate and rotate under the influence of fluctuating forces from the liquid. The concluding chapter focuses on ultrafast processes. Researchers in the fields of physics, chemistry, and biology will benefit from this book.
