If you find yourself on the firing line on a regular or occasional basis this is the perfect go-to guide to help you turn tough questions into positive opportunities. Great Answers to Tough Questions at Work promotes a confident 'win-win-win' mindset for questioner, answerer and wider audiences beyond. Author Michael Dodd provides golden formulae and proven strategies for constructing inspirational answers—however challenging, vicious, tricky or stupid the question. He outlines simple but successful techniques for dealing with the kind of nightmare questions which all ambitious people in the workplace have to face along their journey, whatever stage of their career. Contains critical communication skills for executives, managers, leaders and those aspiring to fill these roles Covers a wide range of work place scenarios such as job interviews, performance reviews, negotiations, customer relations, parliamentary inquiries and cross-examination Discusses how to see the issues underlying tough questions that you face in a different, more positive, solution-oriented way Includes case study examinations of key moments where people in the public spotlight have done something particularly well or particularly badly while answering questions and draws out the lessons for readers. In almost all principled accounts of questions questions are related to the corresponding answers. Zellig Harris (Harris 1978:1), for example, maintains that" ... all interrogative sentences can be derived, by means of the independently established transformations of the language, from sentences which assert that someone is asking about a disjunction of statements which are the relevant possible answers to that interroga tive." This amounts to the claim that a yes-no question such as Will John stay? is derived from I ask you whether John will stay and a wh question such as Who came is derived from something like I ask you whether A came or B came or ... or X came .. Though in generative grammar interrogatives are not derived from the corresponding declaratives, the semantic interpretation of questions is akin to the syntactic source of questions posited by Harris. Jerrold J.Katz and Paul M.Postal (Katz-Postal 1964:113-117) state a reading rule for Q, the interrogative constituent, which boils down to (1) in the case of yes-no questions and to (2) in the case of wh-questions. (1) Tell me which of the following is true: John will stay or John will not stay. (2) Tell me which of the following is true: A came or B came or ... or X came. Thus, the semantic interpretation of questions makes reference to the set of possible answers represented here by a disjunction of statements.
