sonically-charged concepts ranging from those felt, 'heard' and repeated
(silence, the oriental riff, shuffle), to the vocal (whispers, sing, the
disembodied voice), to sounds at the threshold (tin/ny, thump, buzz) to
sounds beyond the limits of audibility (inaudible tremors, distortion,
sub-bass). Sound Affects invites the reader to reflect on the ways that
sounds produce affects and the ways that affects can operate as sound.
Each of the entries develops a particular perspective on sound and affect
through a close analysis of audiovisual and/or sonic objects. The objects
chosen not only illustrate the concept in question but also demonstrate
how the object encourages us to rethink the relationships between
sounds and affects. Influenced by the sound theory of Eugenie Brinkema
(2011), the concepts of Sound Affects plot the shift in volume from
silence that opens up a space to be heard to the audibly near, from the
audibly near to sounds beyond the limits of audibility. Sound Affects is

an intellectual adventure for those who theorize and listen. The book can also be enjoyed as a narrative of sounds, its absences and its shifting intensities.
