In 5 Easy Steps (WINNER OF THE INAUGURAL ASIAN CHIC WRITING COMPETITION 2009) Dec 02 2022 All Elaine Chan has ever wanted is a loving husband and a houseful of children. But when her almost-fiancé unceremoniously dumps her after a humiliating episode involving childhood enemies, condoms and puking, Elaine realizes that a change is in order. Armed with an article promising to show her how to re-invent herself in just 5 easy steps, Elaine finds herself on a one-way coach ride to a new life, a new future, a new her. But the complete makeover of Elaine is an arduous process, and is threatened with derailment by distractions like the mystery of the neighbour's vanishing Indonesian maid, with which Elaine finds herself strangely obsessed. Her efforts to keep all the balls in the air as she plays glamour-puss, model girlfriend (to Evan, a hotshot young lawyer from work) and sleuth extraordinaire all rolled

into one enticing depilated package, frequently lead her into situations that verge on the bizarre. Thank heavens through all the perils that seem to dog her evolution, and whose relaxed attitude to life reminds Elaine of how she used to be. As Elaine struggles to emerge as an elegant butterfly from the dowdy chrysalis that was her former self, she cannot help asking if these five steps are taking her to where she really wants to go.

Computer-Aided Transit Scheduling Jan 23 2022 This volume consists of papers presented at the Fourth International Workshop on Computer-Aided Scheduling of Public Transport, which was held in Hamburg from 28th to 31st July 1987. The first of this series of Workshops was held in Chicago in 1975. Papers presented then tended to look forward to what might be done in the future application of computers to problems in transit scheduling. No presentations described systems which had

been implemented and were being used on a regular basis, although a few papers discussed apparently successful once-off applications in both bus scheduling and bus crew scheduling (or run-cutting). However, within a few months of the end of that first workshop some systems had been implemented, both in Europe and in North America. By the time of the second Workshop, in Leeds in 1980, several systems were in regular use. Most of the crew scheduling implementations were based on heuristic methods (e.g., RUCUS), although mathematically based methods were being used in Quebec City and in Hamburg, and several papers described further mathematical methods in the course of development. A wide variety of bus scheduling approaches was reported, many of them being in regular use.
