"We are All Leaders" Jul 17 2021 "We Are All Leaders"

describes a kind of union qualitatively different from the bureaucratic business unions that make up the AFL-CIO today. From African American nutpickers in St. Louis, chemical and rubber workers in Akron, textile workers in the South, and bootleg miners in Pennsylvania to tenant farmers in the Mississippi Delta, packinghouse and garment workers in Minnesota, seamen in San Francisco, and labor party campaigns throughout the country, workers in the 1930s were experimenting with community-based unionism. Contributors to this volume draw on interviews with participants in the events described, first-person narratives, trade union documents, and other primary sources to tell what workers of the 1930s did. The alternative unionism of the 1930s was democratic, deeply rooted in mutual aid among workers in different crafts and work sites, and politically independent. The key to it was a value system based on egalitarianism. The cry, "We are all leaders " resonated among rank-and-file activists. Their struggle, often ignored by historians, has much to teach us today about union organizing. CONTRIBUTORS: Rosemary Feurer, Peter Rachleff, Janet Irons, Mark D. Naison, Eric Leif Davin, Elizabeth Faue, Michael Kozura, John Borsos, Stan Weir A volume in the series *The Working Class in American History*, edited by David Brody, Alice Kessler-Harris, David Montgomery, and Sean Wilentz

Parallel Robots Sep 18 2021 Parallel robots are closed-loop mechanisms presenting very good performances in terms of accuracy, velocity, rigidity and ability to manipulate large loads. They have been used in a large number of applications ranging from astronomy to flight simulators and are becoming increasingly popular in the field of machine-tool industry. This book presents a complete synthesis of the latest results on the possible mechanical architectures, analysis and synthesis of this type of mechanism. It is intended to be used by students (with over 150 exercises and numerous internet addresses), researchers (with over 650 references and anonymous ftp access to the code of some algorithms presented in this book) and engineers (for which practical results, mistakes to avoid, and applications are presented). Since the publication of the first edition (2000) there has been an impressive increase in terms of study and use of this kind of structure that are reported in this book. This second edition has been completely overhauled. The initial chapter on kinematics has been split into Inverse

Kinematics and Direct Kinematics. A new chapter on calibration was added. The other chapters have also been rewritten to a large extent. The reference section has been updated to include around 45% new works that appeared after the first edition.

Planning and Control of Maintenance Systems Dec 22 2021

Analyzing maintenance as an integrated system with objectives, strategies and processes that need to be planned, designed, engineered, and controlled using statistical and optimization techniques, the theme of this book is the strategic holistic system approach for maintenance. This approach enables maintenance decision makers to view maintenance as a provider of a competitive edge not a necessary evil. Encompassing maintenance systems; maintenance strategic and capacity planning, planned and preventive maintenance, work measurements and standards, material (spares) control, maintenance operations and control, planning and scheduling, maintenance quality, training, and others, this book gives readers an understanding of the relevant methodology and how to apply it to real-world problems in industry. Each chapter includes a number exercises and is suitable as a textbook or a reference for a professionals and practitioners whilst being of interest to industrial engineering, mechanical engineering, electrical

engineering, and industrial management students. It can also be used as a textbook for short courses on maintenance in industry. This text is the second edition of the book, which has four new chapters added and three chapters are revised substantially to reflect development in maintenance since the publication of the first edition. The new chapters cover reliability centered maintenance, total productive maintenance, e-maintenance and maintenance performance, productivity and continuous improvement.

Parallel Kinematic Machines Jun 03 2020 Parallel Kinematic Machines (PKMs) are one of the most radical innovations in

production equipment. They attempt to combine the dexterity of robots with the accuracy of machine tools to respond to several industrial needs. This book contains the proceedings of the first European-American Forum on Parallel Kinematic Machines, held in Milan, Italy from 31 August - 1 September 1998. The Forum was established to provide institutions, technology suppliers and industrial end users with an improved understanding of the real advantages to be gained from using PKMs. This book contributes to a mid-term strategy oriented to reduce time to market and costs, improve production flexibility and minimize environmental impacts to increase worldwide competitiveness. In particular the authors focus on enabling technologies and emerging concepts for future manufacturing applications of PKMs. Topics include: Current status of PKM R&D in Europe, the USA and Asia. Industrial requirements, roadblocks and application opportunities. Research issues and possibilities. Industrial applications and requirements.

Workforce Education Feb 21 2022 A roadmap for how we can rebuild America's working class by transforming workforce education and training. The American dream promised that if you worked hard, you could move up, with well-paying working-class jobs providing a gateway to an ever-growing middle class. Today, however, we have increasing inequality, not economic convergence. Technological advances are putting

quality jobs out of reach for workers who lack the proper skills and training. In *Workforce Education*, William Bonvillian and Sanjay Sarma offer a roadmap for rebuilding America's working class. They argue that we need to train more workers more quickly, and they describe innovative methods of workforce education that are being developed across the country.
