Cognitive Activation in the Mathematics Classroom and Professional Competence of Teachers Jul 18 2021 This work reports the findings of the Professional Competence of

Teachers, Cognitively Activating Instruction, and Development of Students' Mathematical Literacy project (COACTIV). COACTIV applies a broad, innovative conceptualization of teacher competence to examine how mathematics teachers' knowledge, beliefs, motivational orientations, and self-regulation skills influence their instructional practice and teaching outcomes In this project data was collected on various aspects of teacher competence and classroom instruction from the perspective of both the teachers themselves and their students. Moreover, it gauges the effects of these teacher characteristics on student learning, as indexed by the progress students in each class. Questions addressed in the study which are reported in this volume include: What are the characteristics of successful teaching? What distinguishes teachers who succeed in their profession? How can the quality of instruction be improved?

[Transforming the Workforce
for Children Birth Through Age
8](#) Jan 30 2020 Children are
already learning at birth, and
they develop and learn at a
rapid pace in their early years.
This provides a critical
foundation for lifelong
progress, and the adults who
provide for the care and the
education of young children
bear a great responsibility for
their health, development, and
learning. Despite the fact that
they share the same objective -
to nurture young children and
secure their future success -
the various practitioners who

contribute to the care and the education of children from birth through age 8 are not acknowledged as a workforce unified by the common knowledge and competencies needed to do their jobs well. *Transforming the Workforce for Children Birth Through Age 8* explores the science of child development, particularly looking at implications for the professionals who work with children. This report examines the current capacities and practices of the workforce, the settings in which they work, the policies and infrastructure that set qualifications and provide professional learning, and the government agencies and other funders who support and oversee these systems. This book then makes recommendations to improve the quality of professional practice and the practice environment for care and education professionals. These detailed recommendations create a blueprint for action that builds on a unifying foundation of child development and early

learning, shared knowledge and competencies for care and education professionals, and principles for effective professional learning. Young children thrive and learn best when they have secure, positive relationships with adults who are knowledgeable about how to support their development and learning and are responsive to their individual progress.

Transforming the Workforce for Children Birth Through Age 8 offers guidance on system changes to improve the quality of professional practice, specific actions to improve professional learning systems and workforce development, and research to continue to build the knowledge base in ways that will directly advance and inform future actions. The recommendations of this book provide an opportunity to improve the quality of the care and the education that children receive, and ultimately improve outcomes for children.

What Expert Teachers Do Dec 23 2021 How do expert teachers do it? How do they enhance student learning? How do they manage the dilemmas and tensions inherent in working with 25 different students in every lesson? Internationally respected teacher educator John Loughran argues that teachers' knowledge of what they do is largely tacit and often misunderstood. In this book, he distils the essence of professional practice for classroom teachers. Drawing

on the best research on pedagogy, he outlines the crucial principles of teaching and learning, and shows how they are translated into practice using real classroom examples. He emphasises that teaching procedures need to be part of an integrated approach, so that they are genuinely meaningful and result in learning. Throughout, he shows how teachers can engage their students in ways that create a real 'need to know', and a desire to become active learners. *What Expert Teachers Do* is for teachers who want to become really accomplished practitioners.

[Developing the Expertise of Primary and Elementary](#)

[Classroom Teachers](#) Apr 14

2021 *Developing the Expertise of Primary and Elementary Classroom Teachers* challenges many current assumptions about primary education. Tony Eaude uses international research and the experiences

of teachers at different career phases to indicate that primary classroom teachers with a high level of expertise adopt a wide repertoire of strategies and a flexible, reciprocal and intuitive approach to planning, assessment and teaching. He explores why a deep understanding of how young children learn, the ability to create an inclusive environment, relationships of care and trust and teachers who are attuned to children are essential. Eade argues that to develop qualities such as confidence and resilience, to exercise informed intuition and to create a robust professional identity, many constraints on manifesting expertise, some of which are emotional, some more structural, must be overcome. Drawing on the research on professional learning, Eade shows that these abilities and qualities are learned over time, through regular, sustained, contextualised opportunities, relating theory and practice, with the years soon after qualification particularly

significant. He highlights that the professional knowledge and judgement required in complex, changing situations is acquired and refined mainly through guided practice and experience backed by reflection and engagement with research. The need for supportive professional learning communities and for policy which encourages primary classroom teachers' enthusiasm, creativity and willingness to innovate is emphasised and an enriched apprenticeship model - using a variety of processes, including observation of other teachers, practice, mentoring, case studies and discussion - is advocated.

Funds of Knowledge Aug 26 2019 The concept of "funds of knowledge" is based on a simple premise: people are competent and have knowledge, and their life experiences have given them that knowledge. The claim in this book is that first-hand research experiences with families allow one to document this competence and knowledge, and that such engagement provides many possibilities for positive pedagogical actions. Drawing from both Vygotskian and neo-sociocultural perspectives in designing a methodology that views the everyday practices of language and action as constructing knowledge, the funds of knowledge approach facilitates a systematic and powerful way to represent

communities in terms of the resources they possess and how to harness them for classroom teaching. This book accomplishes three objectives: It gives readers the basic methodology and techniques followed in the contributors' funds of knowledge research; it extends the boundaries of what these researchers have done; and it explores the applications to classroom practice that can result from teachers knowing the communities in which they work. In a time when national educational discourses focus on system reform and wholesale replicability across school sites, this book offers a counter-perspective stating that instruction must be linked to students' lives, and that details of effective pedagogy should be linked to local histories and community contexts. This approach should not be confused with parent participation programs, although that is often a fortuitous consequence of the work described. It is also not an attempt to teach parents "how to do school" although

that could certainly be an outcome if the parents so desired. Instead, the funds of knowledge approach attempts to accomplish something that may be even more challenging: to alter the perceptions of working-class or poor communities by viewing their households primarily in terms of their strengths and resources, their defining pedagogical characteristics. Funds of Knowledge: Theorizing Practices in Households, Communities, and Classrooms is a critically important volume for all teachers and teachers-to-be, and for researchers and graduate students of language, culture, and education.

Second International Handbook of Science Education

Jan 12 2021 The International Handbook of Science Education is a two volume edition pertaining to the most significant issues in science education. It is a follow-up to the first Handbook, published in 1998,

which is seen as the most authoritative resource ever produced in science education. The chapters in this edition are reviews of research in science education and retain the strong international flavor of the project. It covers the diverse theories and methods that have been a foundation for science education and continue to characterize this field. Each section contains a lead chapter that provides an overview and synthesis of the field and related chapters that provide a narrower focus on research and current thinking on the key issues in that field. Leading researchers from around the world have participated as authors and consultants to produce a resource that is comprehensive, detailed and up to date. The chapters provide the most recent and advanced thinking in science education making the Handbook again the most authoritative resource in science education.

The Nature and Development of Team Leaders' Professional Knowledge about Aspects of Change in Their Schools Aug 19 2021

Enhancing Professional Knowledge of Pre-Service Science Teacher Education by Self-Study Research Nov 21 2021

Self-study research is making an impact on the field of science education.

University researchers employ these methods to improve their instruction, develop as instructors, and ultimately, impact their students' learning.

This volume provides an introduction to self-study research in science education, followed by manuscripts of self-studies undertaken by university faculty and those becoming university faculty members in science teacher education. Chapter authors range from those new to the field to established

researchers, highlighting the value of self-study research in science teacher education for every career rank. The fifteen self-studies provided in this book support and extend this contemporary work in science teacher education. They, and the subsequent reflections on professional knowledge, are organized into four sections: content courses for preservice teachers, elementary methods courses, secondary methods courses, and preparation of future teacher educators. Respondents from various locations around the globe share their reflections on these sections. A culminating reflection of the findings of these studies is provided at the end of the book that provides an overview of what we have learned from these chapters, as well as a reflection on the role of self-study research in the future of science teacher education.

The Professional Knowledge Base of Science Teaching

Feb 22 2022 Over the past twenty years, much has been written about the knowledge

bases thought necessary to teach science. Shulman has outlined seven knowledge domains needed for teaching, and others, such as Tamir, have proposed somewhat similar domains of knowledge, specifically for science teachers. Aspects of this knowledge have changed because of shifts in curriculum thinking, and the current trends in science education have seen a sharp increase in the significance of the knowledge bases. The development of a standards-based approach to the quality of science teaching has become common in the Western world, and phrases such as “evidence-based practice” have been tossed around in the attempt to “measure” such quality. The Professional Knowledge Base of Science Teaching explores the knowledge bases considered necessary for science teaching. It brings together a number of researchers who have worked with science teachers, and they address what constitutes evidence of high quality

science teaching, on what basis such evidence can be judged, and how such evidence reflects the knowledge basis of the modern day professional science teacher. This is the second book produced from the Monash University- King’s College London International Centre for the Study of Science and Mathematics Curriculum. The first book presented a big picture of what science education might be like if values once again become central while this book explores what classroom practices may look like based on such a big picture. Developing the Expertise of Primary and Elementary

Tony Eade uses international research and the experiences of teachers at different career phases to indicate that primary classroom teachers with a high level of expertise adopt a wide repertoire of strategies and a flexible, reciprocal and

He explores why a deep understanding of how young children learn, the ability to create an inclusive environment, relationships of care and trust and teachers who are attuned to children are essential. Eade argues that to develop qualities such as confidence and resilience, to exercise informed intuition and to create a robust professional identity, many constraints on manifesting expertise, some of which are emotional, some more structural, must be overcome. Drawing on the research on professional learning, Eade shows that these abilities and qualities are learned over time, through regular, sustained, contextualised opportunities, relating theory and practice, with the years soon after qualification particularly significant. He highlights that the professional knowledge and judgement required in complex, changing situations is acquired and refined mainly through guided practice and

experience backed by reflection and engagement with research. The need for supportive professional learning communities and for policy which encourages primary classroom teachers' enthusiasm, creativity and willingness to innovate is emphasised and an enriched apprenticeship model - using a variety of processes, including observation of other teachers, practice, mentoring, case studies and discussion - is advocated.

Enhancing Professional Knowledge of Pre-Service Science Teacher Education by Self-Study Research May 16

2021 Self-study research is making an impact on the field of science education.

University researchers employ these methods to improve their instruction, develop as

instructors, and ultimately, impact their students' learning. This volume provides an introduction to self-study research in science education,

followed by manuscripts of self-

studies undertaken by university faculty and those becoming university faculty members in science teacher education. Chapter authors range from those new to the field to established researchers, highlighting the value of self-study research in science teacher education for every career rank. The fifteen self-studies provided in this book support and extend this contemporary work in science teacher education. They, and the subsequent reflections on professional knowledge, are organized into four sections: content courses for preservice

teachers, elementary methods courses, secondary methods courses, and preparation of future teacher educators. Respondents from various locations around the globe share their reflections on these sections. A culminating reflection of the findings of these studies is provided at the end of the book that provides an overview of what we have learned from these chapters, as well as a reflection on the role of self-study research in the future of science teacher education.
