**Energy and Sustainability II** Jan 16 2022 The way in which our society exists, operates and develops is strongly influenced by the way in which energy is produced and consumed. No process in Industry can be performed without sufficient supply of energy, and without Industry there can be no production of commodities on which the existence of modern Society depends. The energy systems evolved over a long period and more rapidly over the last two centuries, as a response to the requirements of Industry and Society, starting from combustion of fuels to exploiting nuclear energy and renewable resources. It is clear that the evolution of the energy systems is a continuous process, which involves constant technological development and innovation. The presentation on the Second International Conference includes: Renewable Energy Technologies; Energy Management; Energy Policies; Energy and the Environment; Energy Analysis; Energy Efficiency; Energy Storage and Management.

**Transitions in Forest Conservation and Management in Kenya** May 28 2020 The book provides a historical account of changes in direction of forest conservation and management in Kenya. Chapter one covers forestry practice in the period when Kenya was a colony of the British empire. The chapter highlights the contributions and influences made by British forestry personnel. Chapter two covers the period of rapid expansion of industrial forest plantations from independence to mid-1980s. Chapter three covers the uptake of tree growing and forest conservation by conservation groups and by farming communities. Chapter four covers period of rapid decline in effective management of

forests and increased forest destruction. Chapter five presents some outstanding challenges for the current forestry regime. Chapter six covers new and emerging areas forestry R&D.

**Insect-resistant Maize** Sep 12 2021 Many farmers in sub-Saharan Africa suffer heavily from crop losses due to stem borer pests. Insecticides are often unaffordable; therefore, maize plants must be made resistant to pests. The 'Insect Resistant Maize for Africa' (IRMA) project in Kenya was aimed at developing new maize varieties both by conventional methods and by biotechnologically incorporating the endotoxin produced by the soil bacterium *Bacillus thuringiensis*. The author gives an impartial and chronological account of this exemplary project between 1999 and 2008, supplemented by discussions of agricultural development policy and descriptions of Kenyan smallholders and the project team. He also takes critical and rational positions on the use of modern plant breeding techniques, biotechnology and development policy.

**Chinese History** Dec 03 2020 Endymion Wilkinson's bestselling manual of Chinese history has long been an indispensable guide to all those interested in the civilization and history of China. In this latest edition, now in a bigger format, its scope has been dramatically enlarged by the addition of one million words of new text. Twelve years in the making, the new manual introduces students to different types of transmitted, excavated, and artifactual sources from prehistory to the twentieth century. It also examines the context in which the sources were produced, preserved, and received, the problems of research and interpretation associated with them, and the best, most up-to-date secondary works. Because the writing of history has always played a central role in Chinese politics and culture, special attention is devoted to the strengths and weaknesses of Chinese historiography.
