This brief introduction to children's literature genres leaves time to actually read children's books. Written on the assumption that the focus of a children's literature course should be on the actual books that children read, the authors first wrote this book in 1996 as a "textbook for people who don't like children's literature textbooks." Today it serves as an overview to shed light on the essentials of children's literature and how to use it effectively with young readers, from PreK to 8th grade. The authors use an enjoyable, conversational style to achieve their goal of providing a practical overview of children's books that offers a framework and background information, while keeping the spotlight on the books themselves. Educators who teach children's literature at the college level as part of the pre-service experience seldom allocate enough space in the curriculum for nonfiction literature. This book recognizes the viability of nonfiction as a literary genre that demands critical analysis, celebrates storytelling in its varied forms, and invites teacher educators and pre-service teachers, our primary audience, to nurture a spirit of inquiry and skepticism in the classroom. It is an excellent resource for teacher educators looking for a variety of nonfiction texts to include in their literacy curriculum at both the undergraduate and graduate levels. It also offers critical approaches through which students are encouraged to read these texts, and ideas for critical inquiry with young learners. Includes universities, professional and technical schools. Includes universities, professional and technical schools. The *Philological Quarterly's* annual bibliographies of modern studies in English neoclassical literature, published originally from 1961 to 1970, are reproduced in two volumes. Readers will find the same features that distinguished earlier compilations in the series: inclusive listing of significant works published in each year (including sections on the historical and cultural background as well as literature), authoritative reviews of important works, critical comments, and a full index that is in itself an indispensable reference tool. Originally published in 1972. The Princeton Legacy Library uses the latest print-on-demand technology to again make available previously out-of-print books from the distinguished backlist of Princeton University Press. These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions. The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905. Dark novels, shows, and films

targeted toward children and young adults are proliferating wildly. It is even more crucial now to understand the methods by which such texts have traditionally operated and how those methods have been challenged, abandoned, and appropriated. *Reading in the Dark* fills a gap in criticism devoted to children's popular culture by concentrating on horror, an often-neglected genre. These scholars explore the intersection between horror, popular culture, and children's cultural productions, including picture books, fairy tales, young adult literature, television, and monster movies. *Reading in the Dark* looks at horror texts for children with deserved respect, weighing the multitude of benefits they can provide for young readers and viewers. Refusing to write off the horror genre as campy, trite, or deforming, these essays instead recognize many of the texts and films categorized as "scary" as among those most widely consumed by children and young adults. In addition, scholars consider how adult horror has been domesticated by children's literature and culture, with authors and screenwriters turning that which was once horrifying into safe, funny, and delightful books and films. Scholars likewise examine the impetus behind such re-envisioning of the adult horror novel or film as something appropriate for the young. The collection investigates both the constructive and the troublesome aspects of scary books, movies, and television shows targeted toward children and young adults. It considers the complex mechanisms by which these texts communicate overt messages and hidden agendas, and it treats as well the readers' experiences of such mechanisms. The rapid growth in online and virtual learning opportunities has created culturally diverse university classes and corporate training sessions. Instruction for these learning opportunities must adjust to meet participant needs. *Cross-Cultural Considerations in the Education of Young Immigrant Learners* brings together professional discourse regarding best practices, challenges, and insights on both higher education and corporate training settings. This book is a vital instrument for instructional designers, faculty, administrators, corporate trainers, students and researchers interested in design and facilitation of online learning for a global audience. Technology has become an integral part of our everyday lives. This trend in ubiquitous technology has also found its way into the learning process at every level of education. *The Handbook of Research on Education and Technology in a Changing Society* offers an in-depth description of concepts related to different areas, issues, and trends within education and technological integration in modern society. This handbook includes definitions and terms, as well as explanations of concepts and processes regarding the integration of technology into education. Addressing all pertinent issues and concerns in education and technology in our changing society with a wide breadth of discussion, this handbook is an essential collection for educators, academicians, students, researchers, and librarians. Includes universities, professional and technical schools. Many reading programs today overlook an essential component of literacy instruction—helping children develop an enduring love of reading. Numerous practical strategies are presented for engaging students with picturebooks, fiction, nonfiction, and

nontraditional texts. Lively descriptions of recommended books and activities are interspersed with invaluable tips for fitting authentic reading experiences into the busy school day. Every chapter concludes with reflection questions and suggestions for further reading. The volume also features reproducible worksheets and forms. Thinking Through the Arts draws together a number of different approaches to teaching young children that combine the experience of thinking with the act of expression through art. Developed as an inclusive, broad-ranging and user-friendly text, Thinking Through the Arts presents the unique insight of teachers as researchers, and counters the view that art is emotionally-based and therefore irrelevant to thinking and learning. The areas covered include drama, dance, music, arts environments, technologies, museums and galleries, literacy, cognition, international influences, curriculum development, research and practice. Early childhood and primary teachers and students alike will find this book is an invaluable source of new insights for their own teaching. This Special Issue comprises selected papers from the proceedings of the 5th International Electronic Conference on Sensors and Applications, held on 15–30 November 2018, on sciforum.net, an online platform for hosting scholarly e-conferences and discussion groups. In this 5th edition of the electronic conference, contributors were invited to provide papers and presentations from the field of sensors and applications at large, resulting in a wide variety of excellent submissions and topic areas. Papers which attracted the most interest on the web or that provided a particularly innovative contribution were selected for publication in this collection. These peer-reviewed papers are published with the aim of rapid and wide dissemination of research results, developments, and applications. We hope this conference series will grow rapidly in the future and become recognized as a new way and venue by which to (electronically) present new developments related to the field of sensors and their applications.
