This open access book is a unique resource for health professionals who are interested in understanding the philosophical foundations of their daily practice. It provides tools for untangling the motivations and rationality behind the way medicine and healthcare is studied, evaluated and practiced. In particular, it illustrates the impact that thinking about causation, complexity and evidence has on the clinical encounter. The book shows how medicine is grounded in philosophical assumptions that could at least be challenged. By engaging with ideas that have shaped the medical profession, clinicians are empowered to actively take part in setting the premises for their own practice and

knowledge development.
Written in an engaging and accessible style, with contributions from experienced clinicians, this book presents a new philosophical framework that takes causal complexity, individual variation and

medical uniqueness as default expectations for health and illness. Intended to assist designers in selecting the best available structural components for a given design problem and to provide an

overall understanding of the role of steel tubular members in structural design. En instruktionsbog (Flight Manual) for F-84F Thunderstreak/Thunderjet.
